

PUR

RamCAT6-Flex
AWG 26/19 - SF/UTP - PUR

- 4 x 2 x 0.15 mm² (AWG 26/19) - 100 Ohm
- compression resistant construction due to a PE cross
- robust PUR overall jacket
- low-temperature-flexible down to -40 °C
- compatible to most standard RJ45 connectors
- 10GBase-T links up to 60 m
- analog and digital audio signals
- digital media over IP

The RAMCAT6-flex cable is designed for data transfer in mobile operation. Developed for a frequency of 500 MHz, it is suitable for data transfer rates of up to 10 Gbit/s. The RAMCAT6 is the cable of choice for data transfer in the Ethernet applications 1000BaseT and 10GBase-T where drag chains and cable drums are used. The rugged data cable offers characteristic impedance of 100 Ohm and has four twisted pairs with copper cores (19 x 0.10 mm). The matched lay lengths of the individual pairs and the sophisticated cable stranding with central PE cross are designed to maximize NEXT (near-end crosstalk) and FEXT (far-end crosstalk) values. With a cross-shaped PE central filler and abrasion-proof PUR jacket, the cable is ideal for mobile use on the road. Dual shielding reliably protects against electromagnetic interference. Ideal for the following possible applications such as digital media: SMPTE 2110, AVB, NDI, BLULink or audio: analog (MIC,LINE) AES/EBU, AES67, RAVENNA, Dante, AES50, AVB, MILAN, MAD1, GigaACE, Ethersound, RockNet and many other multimedia applications.

design

conductor	stranded bare copper, 19 x 0,10 mm (AWG 26/19)
core insulation	Foam-Skin PE, nominal diameter 1.0 mm
core stranding	2 cores twisted to a pair
twisting	4 pairs twisted within a central PE cross
overall shield	AL/PET foil + tinned copper braid (85% coverage)
outer jacket	PUR, black
overall diameter	7.0 mm

mechanics

min. bending radius	
installation operation	8x overall diameter
working temperature	15x overall diameter
halogen-free	-40°C / +80°C
	acc. to IEC 60754-1

electric

conductor resistance	< 150 Ω/km
mutual capacitance	47 pF/m
characteristic impedance	100 Ω ± 15%
signal speed	0.72 c
propagation delay	≤ 520 ns/100m @ 100 MHz
delay skew	≤ 40 ns/100m @ 100 MHz
